

A woman with dark hair, wearing a dark long-sleeved shirt, is holding a Picard AluTec hammer. The hammer has a silver head with a black textured grip on the back and a black handle with a silver section. The woman is looking directly at the camera with a neutral expression. The background is a plain, dark grey.

# DOUBLY STRONG: ALUTEC®

AluTec® Framing-Hammer 1095

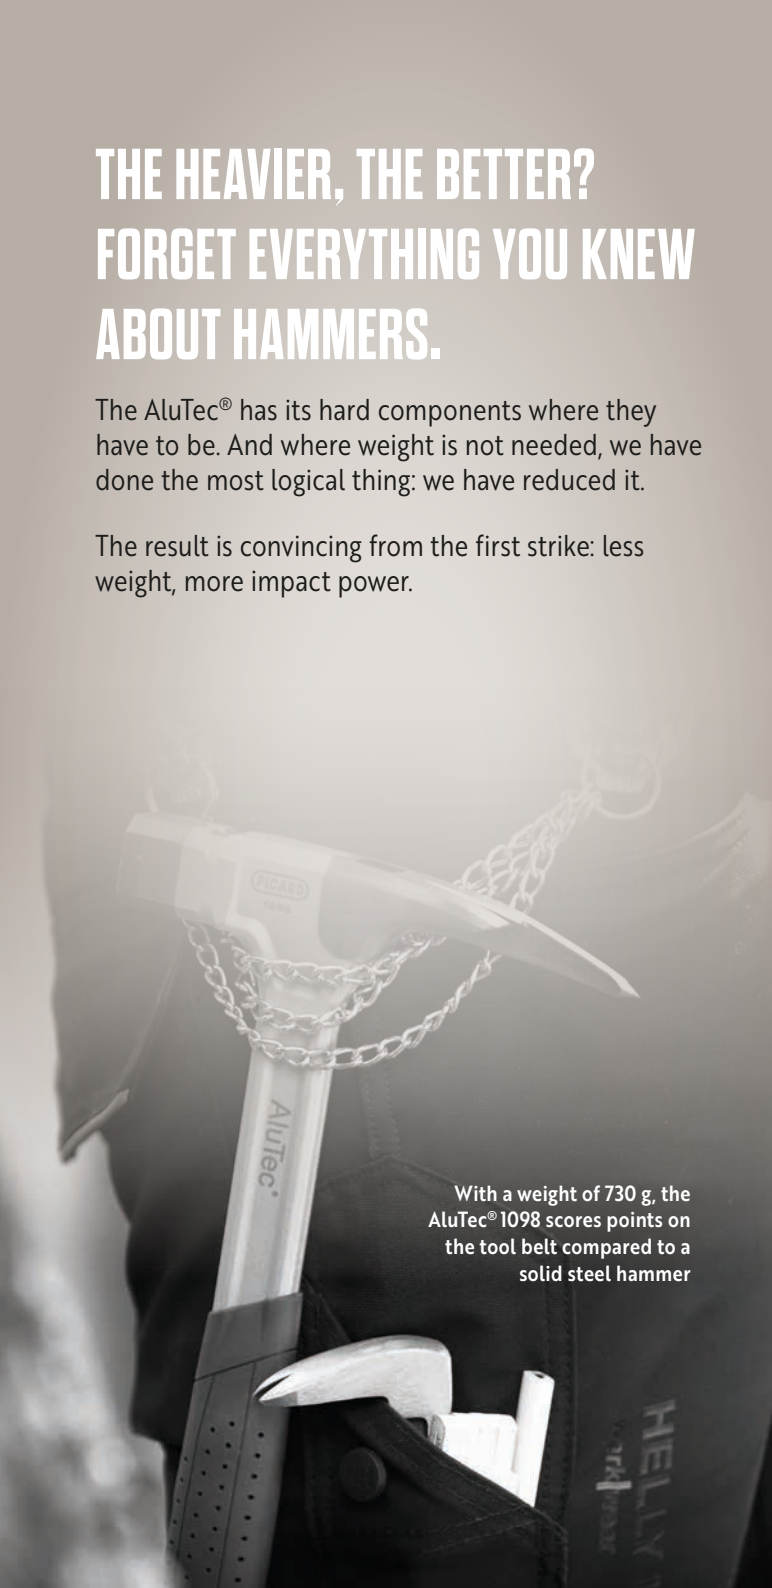

AluTec® Rip-Hammer 1091

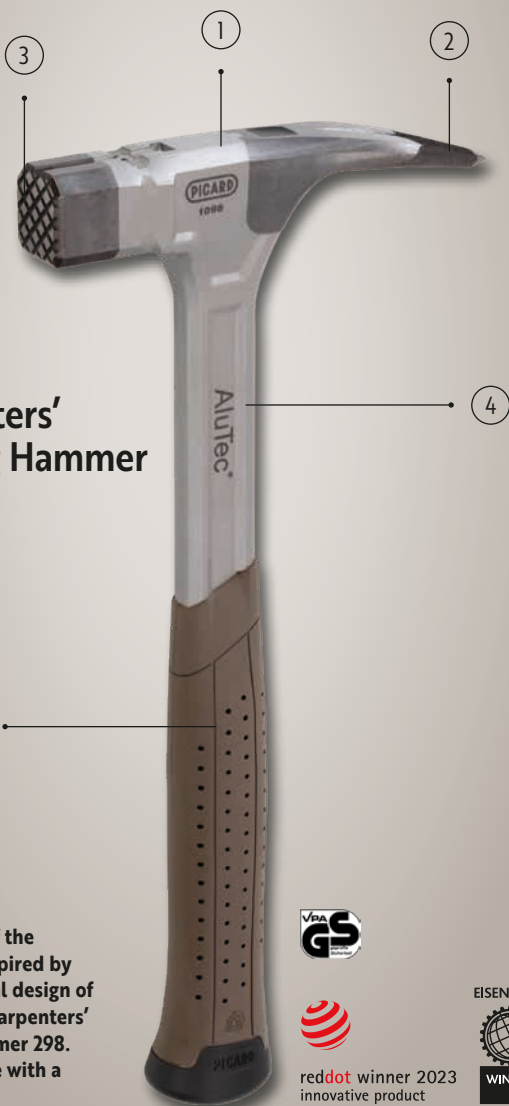

# THE HEAVIER, THE BETTER? FORGET EVERYTHING YOU KNEW ABOUT HAMMERS.

The AluTec® has its hard components where they have to be. And where weight is not needed, we have done the most logical thing: we have reduced it.

The result is convincing from the first strike: less weight, more impact power.

With a weight of 730 g, the AluTec® 1098 scores points on the tool belt compared to a solid steel hammer

# AluTec® Carpenters' Roofing Hammer 1098

↑ ↓ 33 cm

730 g

The handle of the AluTec® is inspired by the traditional design of the PICARD Carpenters' Roofing Hammer 298. Also available with a smooth face.

## AluTec® Rip-Hammer 1091

↑ ↓ 35 cm

↑ ↓ 740 g

The Rip-Hammer 1091 allows precise ripping and prying operations. Its powerful head provides excellent control. Also available with a checkered face.

## AluTec® Framing-Hammer 1095

↑↓ 40,5 cm

↑ 775 g

The long handle of the Framing-Hammer 1095 ensures high reach and leverage. Also available with a checkered face.

# LESS WEIGHT, MAXIMUM IMPACT

Based on more than 160 years of experience, the AluTec® was designed as a further development of the proven classic – the Carpenters' Roofing Hammer 298. The combination of aluminium and robust C45 steel show what a modern monobloc hammer is capable of: optimum impact force with reduced weight. The inseparable connection of the steel and aluminium parts makes the AluTec® a very special tool. While the weight of only 730 g scores points when the hammer is worn on a tool belt, the robustness, which is in no way inferior to an all-steel hammer, in combination with the outstanding ergonomics is convincing. The AluTec® is nothing less than the reinvention of the hammer.

## **01\_Head**

Aluminium meets steel: light, but highly break-resistant where it makes sense. Hard and robust where it gets down to business. The inseparable connection of the components ensures maximum safety. Carefully selected aluminium and steel qualities give AluTec® a long life span and high stability. The nail holder features a powerful magnet.

## **02\_Claw and point**

The claw and the slim, extended tip are precisely machined and inductively hardened. This ensures that even small nails are securely gripped.

## **04\_Shaft**

The face is carefully hardened and specially tempered; the roughened version has particularly deep checks.

## **04\_Stiel**

The profile of the shaft is as weight-saving as it is stable.

## **05\_Handle**

The handle of the AluTec® quotes the traditional handle used in the craftsmanship – the one of the PICARD Carpenters' Roofing Hammer 298. For good reason: Shaft and handle are permanently bonded with a specially developed two-component industrial adhesive. A special design ensures that the end of the handle does not work its way through the grip. The vibration-damping material and ergonomic shape ensure low-fatigue work.
